

GALEO-R

The stylish GALEO-R has been developed to offer a keypad solution to areas where it is difficult or uneconomical to run cables.

A stylish keypad with soft blue backlighting, the GALEO-R performs equally well indoors or outside. A modern design which is easy on the eye, but provides maximum resistance to vandalism due to its rounded edges which deflect being struck.

The GALEO-R is a surface mount keypad with a very shallow profile (only 27mm), which gives it a "semi-flush" appearance.

The keypad has 22 individual user codes of 5-digits, with a master code which is used to enter the programming mode.

There is audible feedback from the keypad which indicates to the user if entry has been granted or not, and in programming mode confirms the input of programmed information.

Compact, and manufactured from heavy duty Zamak cast alloy, the GALEO-R employs the latest Keeloq® technology to prevent the cloning of radio signals. The keypad is compatible with all CDVI receivers in the RX26 range.

For details of radio receivers, please contact your local distributor or email CDVI Ltd to receive appropriate information.

GALEO-R - Technical Specifications

Product Specifications

IP Rating: IP64
Modulation: ASK
Encoding: Keeloq hopping code

Codes

Master code: 1
User codes: 22
Code length: 5 digits

Electrical Specifications

Voltage: 3.6V Lithium battery
Current: standby 0.8uA, working 28mA

Dimensions

Dimensions: 110 x 75 x 27mm
Environment: -25°C to +70°C
